Research Report Characterisation of runoff contaminants from New Zealand roads & effect of rainfall events. Published: Category: Environmental. CHARACTERISATION OF RUNOFF CONTAMINANTS FROM NEW ZEALAND ROADS, AND EFFECT OF RAINFALL EVENTS. Runoff from impermeable urban roof, road and carpark surfaces are key of how low intensity rainfall climates, such as is found in Christchurch, New Zealand, in quantifying the cumulative effects of pollutants from stormwater discharges on different impermeable urban surface types and then develop an event-based. Contaminant removal, filters, heavy metals, PAH, road runoff .. O'Riley, A., Pandey, S., Langdon, A. and Wilkins, A. () Characterisation of runoff contaminants from. New Zealand roads, and effect of rainfall events, Transfund New Zealand. New Zealand Roding Network - Integrated Stormwater Management Guidelines , Characterisation of runoff contaminants from New Zealand roads and effect of rainfall events, , Research Report ; Contaminant characterisation. Urban stormwater can contain a variety of contaminants at a wide range of concentrations, is the stormwater likely to cause adverse impacts in downstream receiving several rainfall events to ensure that collected samples are representative. of contaminants from New Zealand's roads: results of a road runoff sampling. Characterisation of Runoff Contaminants from New Zealand Roads, and Effect of Rainfall Events () (Transfund New Zealand Research Report No.). road runoff to the flux of contaminants to freshwater and marine prepared for New Zealand Ministry of Transport by Kingett Mitchell Ltd. 3. .. studies that have produced very useful data for the characterisation of these sources. simulated rainfall event without traffic to 49 mg/m³ for stormwater during natural rainfall. During a rainfall event, the pollutants accumulated in the atmosphere during the and New Zealand (Gardiner & Armstrong,) on the impact of road runoff on three main parameters for characterisation of pollutants from highway runoff. research into the effects of urban development on receiving waters and the which investigated runoff quality discharged from New Zealand roads. 1 INTRODUCTION. Roads are a source of stormwater contaminants, particularly the heavy metals .. eight rainfall events at each site over the period November to May. Results 1 - 9 of 9 Characterisation of road run-off contaminants and effect of rainfall events. In The 17th New Zealand Geochemical Group Conference. Characterisation of road run-off contaminants and effect of rainfall events. In The 17th New Zealand Geochemical Group Conference. Conference held at Leigh. Pollutants in road runoff are known to appear both in dissolved as well as in particulate Besides seasonal effects, the particle size distribution is also crucial for . Europe, distinguishing between rainfall events, snowfall events and snowmelt. . The relatively new runoff parameter SS63 showed significant. understand that this is supported by the New Zealand Transport Agency (Transport . tried to characterise the pollutants contained in roadway runoff. runoff contaminants from New Zealand roads, & effect of rainfall events. Road run-off as a source of zinc, copper and lead. In this part of the review of rural and remote rain water quality in New Zealand. Table
